Beverly King, [kingb14@ecu.edu](mailto:kingb14@ecu.edu)

Institutional Planning, Assessment & Research  
East Carolina University

# About ECU

- Public, 4-year university
- 10 degree-granting colleges/schools, including medical & dental schools
- One of 17 institutions within the UNC system
- Carnegie class: Doctoral University, High Research Activity
- Enrollment of almost 30,000; more than 2000 employees with a faculty appointment

# Presentation Overview

- Context of the Study – UNC System Peer Study
- ECU's Internal Peer Study Process
- Selecting Peers Using Cluster Analysis
- Peer Selection Dashboard
- Recommendations for Peer Study

# University of North Carolina System Peer Selection Process 2020

---

# Methodological Approach

- UNC System Office conducted all quantitative analyses for the 16 constituent universities to ensure a common approach.
- Cluster analysis selected as the quantitative approach.
- Ten variables were identified for use in the cluster analysis, six of which were common variables across institutions.
- Output lists were provided to institutions for review & institutions were allowed to identify institutions they felt should be included but were not identified in the cluster analysis.
- Number of peers was restricted to 10-12; aspirational peers were not recommended.
- A final proposed list was negotiated by each institution and the UNC System Office.

# Cluster Analysis

- Began with all institutions who reported data to IPEDS, excluding private institutions and institutions who do not award bachelor's degrees.
- Any institution with a missing response for one of the 10 variables was removed from the dataset.
- All variables' values were scaled & steps were taken to normalize/standardize the spread within each variable with additional data manipulations (especially for the financial variables) to correct for skewness in the distribution.
- Large k-means clustering was used to identify outliers (with outliers ending up in clusters by themselves).
- Outliers were removed from the dataset and those remaining were re-standardized.
- New k-means clusters analysis run using an appropriate k-based value based on model measures and other key assessment criteria producing a final list of in-cluster institutions.

# Recommended Uses & Timeline

- Peer lists will be used for outcomes assessment in areas such as
  - Student retention rates;
  - Graduation rates;
  - Degree production;
  - Research productivity; and
  - Other relevant metrics, particularly those associate with the UNC System strategic plan.
- Peer sets will not be used for faculty salary benchmarking.
- New peer study will be conducted in 2024-2025.

# East Carolina University's Internal Peer Study Process

---

# Representation of ECU's Peer Selection Committee

- Academic Affairs
- Health Sciences
- Research, Economic Development and Engagement
- Student Affairs
- Administration and Finance
- Chancellor's Division
- Faculty Senate
- Staff Senate
- Faculty Representative
- Associate Provost for IPAR (serving as campus contact)
- Director of IR
- Data Analyst and Statistician

# ECU Peer Study Process

## Step 1

- Understanding data, methodology and intended uses of peers
- Selecting variables for cluster analyses

## Step 2

- Reviewing internal cluster analysis results
- Reconciling with UNC System results (IR only)

## Step 3

- Comparing and selecting potential peers via dashboard
- Collecting additional input from senior administrators

## Step 4

- Negotiating with UNC System Office and finalizing peers
- Updating university dashboards (IR only)

# Considerations for Variable Selection

Several unique characteristics of ECU made the peer selection challenging:

- ECU has a large enrollment. The percentage of health science degrees of total degrees conferred by ECU is exceptionally high among large institutions.
- ECU's medical school has a mission focusing more on medical education than medical research. ECU's research expenditure per FTE is significantly lower than many large institutions with a medical school.
- ECU has a distinction for providing educational access to under-served regions and student populations.

# Variables Used in Cluster Analysis for ECU

- Common to all institutions
  - FTE fall enrollment
  - Percent of UG students receiving Pell Grants
  - UG enrollment as a percent of total enrollment
  - Percent of FT faculty
  - Institutional expenditures per FTE
  - Academic program mix: self-defined by each institution; ECU chose percent of health science degrees
- Chosen from a list provided by UNC System Office
  - Percent of underrepresented minority student enrollment
  - Core operational revenue per FTE
  - Research expenditure per FTE
  - Percent of doctoral degrees awarded

# Selecting Peers Using Cluster Analysis

---

# Do other schools use cluster analysis to select peers?

Institution that conducted the peer study	Year	Cluster analysis?	Which kind of cluster analysis?	Peers solely selected by the cluster analysis?
<b>Austin Peay State University</b>	2018	Yes	Hierarchical	No
<b>NYIT School of Management</b>	2012	Yes	Hierarchical	Yes
<b>University of Central Florida</b>	2003	Yes	K-means & Hierarchical	Yes, but “repeated process until satisfied”
<b>Oregon University System</b>	2000	Partially	List by “distance”	No

# Steps in ECU Internal Cluster Analysis

## 1. Filter

- IPEDS Dataset – 2018
- Public 4-year or above
- Degree-granting (primarily baccalaureate or above)
- Have first-time, full-time undergraduates
- Do not have all programs offered via DE
- Carnegie Classification 2018: Doctoral Institutions (R1, R2 and Doc/Prof)
- 206 schools

## 2. Exclude schools with missing data on ten selection variables

# Steps in ECU Internal Cluster Analysis (Cont'd)

## 3. Standardization

Z-score Standardization

## 4. Weight variables (Optional)

## 5. Calculate distance

Euclidean distance

## 6. Select cluster analysis methodology

Hierarchical cluster analysis  
Complete-linkage clustering

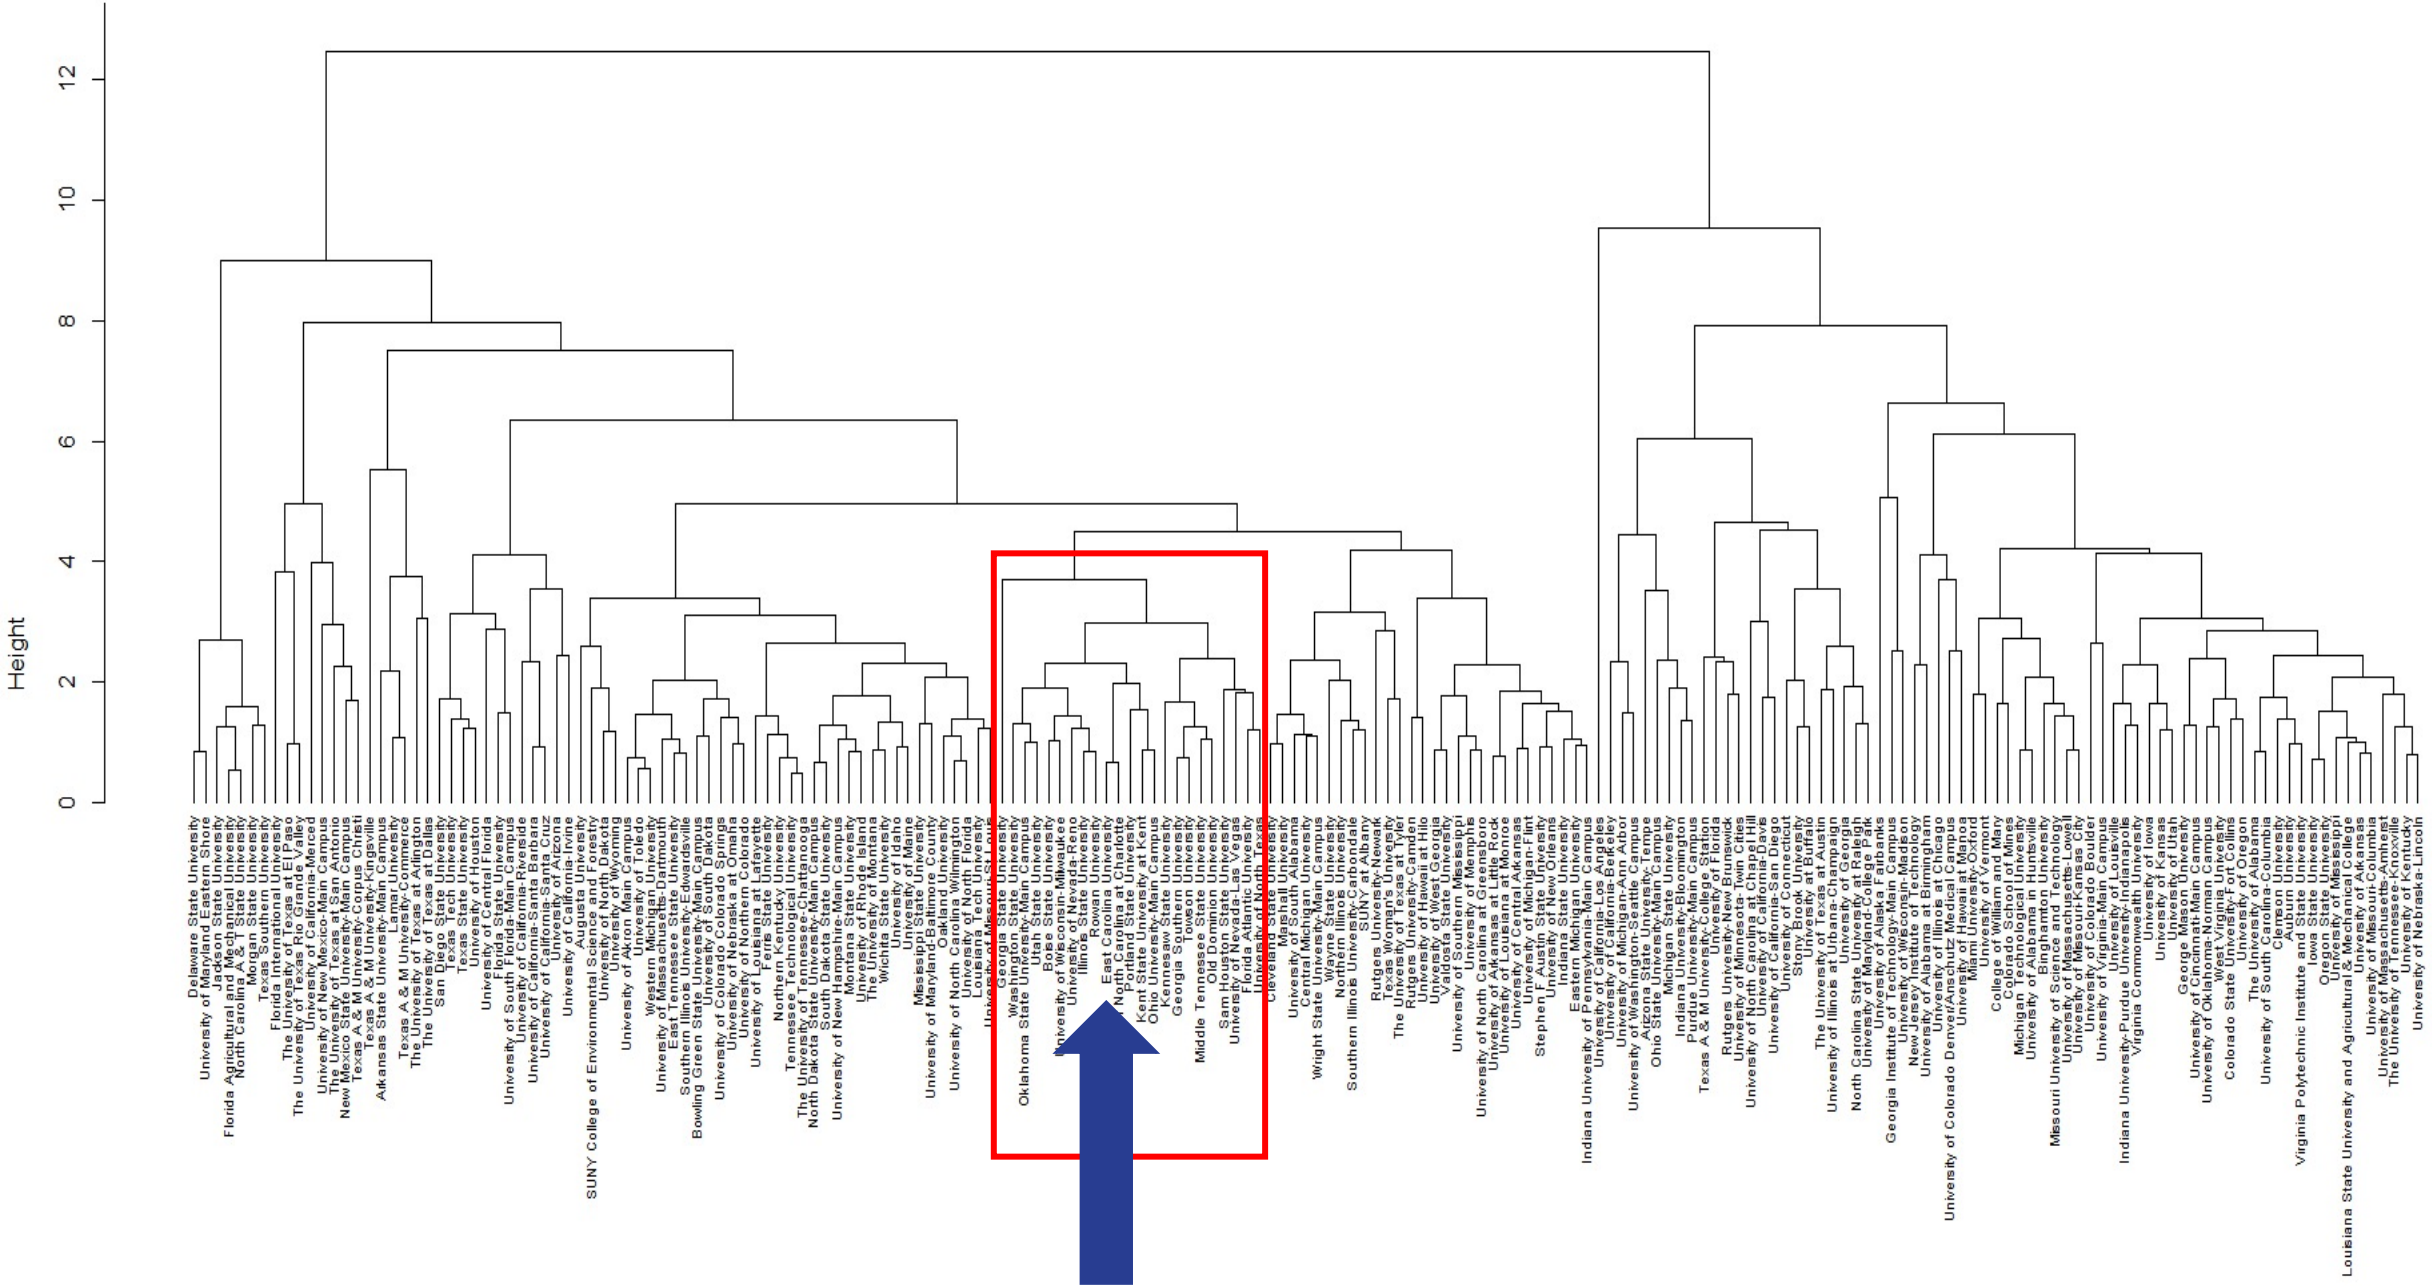

# How Does the Hierarchical Cluster Analysis Result Look?

# Selection Process

- Each committee member, using the dashboard, selected 10-14 candidate institutions.
- A second Peer Selection Dashboard was then deployed to focus on those institutions identified by at least one advisory group member.
- At a follow-up meeting, the Committee took special consideration of:
  - total fall FTE,
  - % of full-time faculty,
  - average full professor salary,
  - research expenditure per FTE, and
  - medical school.

# Recommendations for Peer Study

- Select a representative advisory group
- Reach consensus regarding the use and limitation of peers
  - Recognize complexity of a large institution
  - If the peer list is short, do not recommend to use it for salary benchmark
- Selection of Variables and Methodology
  - Reflect institutional mission and distinctions
  - Align with the intended uses of peers
  - Do not recommend k-means for peer study
- Peer Candidates
  - Appropriate candidate pool to start with
  - Geographic location can be important
  - University system and consortial membership
